The Huffer 56

*Motor Sailer & Motor Yacht
Designed for Open Sea and Inland
Waterways*

The Huffer 56 has been developed from the successful Huffer 35 and 40 which were introduced at the London International Boat Show in 1992.

With draft of just over a metre and beam of 4 metres, the Huffer 56 is ideal to cruise the waterways of mainland Europe, Ireland and some of the rivers and canals of the U.K.

Fully seaworthy, to category C and B of the E.C. Recreational Craft Directive, she can venture further afield as a seagoing motor yacht.

The accommodation is huge for a boat of this size. There is a large stateroom aft with full ensuite, a large wheelhouse/saloon with lounge/dining table, spacious sundeck with second steering position and second lounge/dining position under sun awning. Further forward is a spacious well equipped galley with designer features. At the bow is a second double cabin with ensuite.

This leaves a large area amidships that can be further developed as extra accommodation. For example allowing for work/utility room, a third double cabin or whatever is required for the individual customer.

Power is by 135 horse power 6 cylinder diesel engine, with 240v generator to run such items as washing machine and air conditioning (if required).

The quality and strength in the construction of the hull, and the attention to detail and choice of equipment in the fitting out, make the Huffer 56 ideal for serious long term live aboard cruising both at sea and inland. A true, well found steel motor yacht from a builder with a track record second to none.
